OFFROAD SOLUTIONS

CROOKED RIVER SERIES *Signature Models*

Crooked River is here!

Moxwelding are proud to release their Signature Series of Offroad Touring solutions designed to make choosing a setup for your vehicle more refined.

Based on our vast experience with building customised solutions and our years of using the very products we design and build, we have developed 3 signature models covering a wide range of options.

Currently fitting to TOYOTA HILUX N70 & N80 DUAL CAB, TOYOTA 79 SERIES LANDCRUISER DUAL CAB, FORD RANGER DUAL CAB 2011 –CURRENT, NISSAN NAVARA NP300 DUAL CAB, ISUZU DMAX DUAL CAB 2012-2019, HOLDEN COLORADO DUAL CAB 2012-2020, MITSUBISHI TRITON DUAL CAB, MAZDA BT50

The Weekender

Designed for the weekend adventurer and day to day operator.
Maximum tray space with a small canopy for fridge and storage options.

The Getaway

Developed for the young couples and small families with a passion for regular getaways.
With majority canopy space combined with a small tray section.
The perfect blend.

The Breakout

For the avid adventurers! A full touring solution with all the essentials for extended travels.

All our builds are designed with a strict guideline for ease of use, functionality, and most importantly vehicle handling.
We want our customers to enjoy their time touring as much as we do.

CROOKED RIVER SERIES *Signature Models*

Experience, Development, Building Relationships

Over our journey of the past 10 years we have been fortunate enough to build some great Touring setups for customers that love to get out there and use them. A small family run business, some of our customers have become great friends of ours over the years and this is something we will never lose sight of.

We've had the privilege of building products for market leading companies and social media identities such as Brett from Crashpad Outdoor Gear, Sam Reed from Livin4x4, Raslarr Engineering, and more.

Seeing Photos and hearing the stories from our customers trips is fantastic and something we really look forward to.

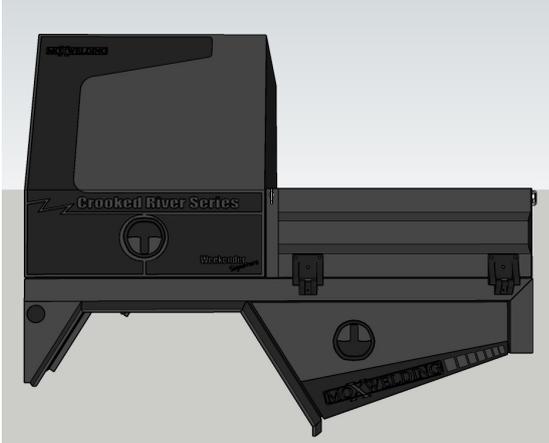

Hopefully we will be seeing your pics and stories in the near future!

Additional Information & Queries

Why don't the signature models feature a rear trundle drawer?

At moxwelding Offroad solutions we like to factor in every element of design to reach an overall build quality that isn't flawed by unnecessary accessories and weight distribution. We don't build to purely suit current trends. Our solutions must be both practical and aesthetically pleasing. Not only does your new build need to make your camping and touring experience much more enjoyable, it also has to handle and perform safely and comfortably both on and Offroad.

- **WEIGHT FACTOR**

With building a strong, dust and water proof trundle drawer comes a serious weight factor. An empty 1200 deep drawer unit will weigh roughly 55kg. Placing this additional weight, plus additional weight of contents, at the rear of a vehicle can seriously affect the driving and handling, not to mention adding to GVM complications in regards to total build weight and additional storage weight.

- **SIZE LIMITATIONS**

When building drawer units housed under our trays, we are limited by factors such as bottom of tray to highest point of chassis crossmembers and other component mounts. These factors limit the height we can build our drawer housing which severely affects the depth of the internal slide out drawer. Unless we lift the tray and canopy unit much higher than usual, we normally end up with a drawer that is no deeper than 100mm.

- **COST EFFICIENCY**

It takes a lot of labour and materials to properly build a well sealed trundle drawer. When comparing cost against factors such as additional weight and actual usable space, we find the negatives far outweigh the minimal benefits. With many other options for storage space available, it was a very quick decision to not include them with any of our signature models

What is the warranty specifics with a Moxwelding Signature build?

Moxwelding is a company that stands behind its products.

Moxwelding product warranty - all moxwelding manufacturing and fitting criteria covered by lifetime warranty. Lifetime warranty must be met with regular service, maintenance, and inspection. Warranty does not cover general wear and tear from constant Offroad and harsh usage conditions. Modification and adaptation may result in voidance of warranty.

Component and fittings warranty—all components and fittings have different manufacture warranty ranging from 12 months minimum.

Electrical warranty—fitting and installation covered in full. Individual component warranty determined by manufacturer and detailed in all component booklets

Powder and Coatings warranty— We don't take any shortcuts when it comes to the necessary steps to ensure the ultimate bonding and coating quality on our products. All coatings are covered by a lifetime warranty for severe lifting or separation. Due to the harsh nature of our operating conditions, scratches, scrapes, chipping, scuffing, and other surface integral damage factors can not be covered. Cleaning and detailing must be carried out with light duty detergents and hot water only. Chemical use will void any warranty.

CROOKED RIVER SERIES

Signature Models

Additional Information & Queries

Rear sensors, camera's

Moxwelding will relocate reverse cameras and sensors, however as they are fitted into a non-factory position, they may operate a little different to original setting. Cameras are positioned as best as possible for clear vision.

Upgraded fuel filler

Moxwelding upgrades the filler inlet to a flush mount filler port with integrated breather. Due to the lower relocation of fillers from tub to tray installation, you may experience some 'clicking' depending on how the pumps are set up to flow at each station. Rotating the filler nozzle to find the perfect alignment will overcome this issue.

Hi-Flow pumps are not recommended for non-commercial vehicles. Fuel delivery from these pumps is of a much higher flow rate and will exceed many vehicle fuel venting systems resulting in fuel surging back out of the filler port. We design our filler systems for regular flow pumps only.

Tub or existing tray removal

Removal of factory tubs are charged at \$275inc. This covers time involved in removal, storage and disposal requirements. For customers wanting to keep their tub, we suggest prior removal before delivery of vehicle at our premises. Vehicles can be legally delivered as cab chassis providing tail lights are in working order (cable tie to rear), and tyres are covered (simple sheet of ply over top of tyres), registration plate clearly visible. Transport is also another option and we can help to organize at competitive rates. Moxwelding takes no responsibility for any damage of tubs upon removal.

Suspension Upgrade / GVM concerns

Moxwelding highly recommends talking to us before hand to determine a suspension solution prior to installation. We can give an accurate weight guide for your build, and with factoring in other aspects such as additional loading/towing we can help to get you fitted with the suspension you require. A GVM upgrade may be recommended on most makes and models to ensure legal touring on your adventures.

Dust and Water proofing

You may have noticed we build our doors differently to many other manufacturers. Not only does this give us a completely smooth and border free outer face, it gives us the ability to design a canopy with a complete gutter system that comprises a large dust seal along with another dust seal attached to the adjoining door. Essentially becoming a double seal, we find it helps to eliminate any dust and water ingress over time due to general softening/wear of seals, and failure to adjust door lock compression. We don't fit air vents as these can assist in water, dirt, dust, bug ingress over time.

CROOKED RIVER SERIES

Signature Models

Additional Information &

Custom colours

All Moxwelding builds are finished in element black textured powdercoat. We find this to be an extremely durable and aesthetically pleasing colour. For custom finishes we offer paint match/customized colours on our tray and canopy doors only.

Can I fit the build on another vehicle?

Moxwelding builds all units to perfectly fit each manufacturer's vehicle models. Mounts are designed and made to suit vehicle specifics. All vehicles have different dimensions relating to axle location and chassis widths which affects tray guard location, side toolbox sizing, mount and rail locations. If upgrading your vehicle to a newer model (hilux to hilux, ranger to ranger) the unit can be a direct swapover.

Can I fit a rooftop tent to my build?

Moxwelding recommends Bush Company alpha rooftop tents and the Darche ridgeback tents. These tents are fitted by us with our dedicated mounting systems. Other brand tents can be fitted to all models with the inclusion of our flat rack.

Are my 12v accessories easily accessed?

All 12v accessories that require normal use are placed in easily accessible locations ready to use. Any item such as DC charger, inverters, fusing, batteries are placed securely and out of sight in our fridge cavity to avoid tampering and damage. All cabling is run through closed channels and paths free from interference and damage.

Can I get a "jack off" canopy?

We made the decision to stop building "jack off" style canopies due to the fact that approx. 95% of our customers that purchased one found out quite quickly its not as versatile as it appears and they rarely/never used the "jack off" system again. Door openings are significantly decreased to allow for leg inserts which takes away from the internal usability. The added costs and weight from materials including quality jacking legs are significant. The idea of touring and leaving your canopy at a caravan park requires taking the large, heavy, and protrusive legs along for the journey which takes crucial space away from necessary items. All wiring must be plug and play which adds to cost. Another factor is that the tray now requires a full floor and headboard for cabin protection once canopy is removed, adding once again more cost and weight.

For any further enquiries, to make a booking, or request an official quote, please get in contact with us today!
